ReLoop.

Old electronics don't belong in a drawer, or in the bin.

WHY IT MATTERS

1.75 million tonnes
of e-waste in India in FY 2023–24[1]

1.94 million tonnes
estimated for FY 2024–25[1]

In Jammu, old phones, laptops and chargers pile up in repair shops, offices and homes. Much of it still works or can be fixed. Batteries and boards need safe handling, not the scrap heap.

HOW RELOOP WORKS

1. **Sell or drop off**
   Repair shops and retailers: our Tuesday and Friday pickup route. Colleges and offices: book a pickup. Households: drop off at the hub or a partner shop from November 2026.

2. **We grade it at our Jammu hub**
   Every item gets an RL-JMU tag and a grade from A to D. Phones and drives are wiped before anything is listed.

3. **It gets its next life**
   What works is resold, what can be fixed is repaired, good parts are reused. Only what is truly dead, and loose or swollen batteries, go to the authorised recycler, VRG Groups, Gangyal.
